Dhruv Singh

Full-stack developer focused on scalable backend systems, API infrastructure, and performance optimization

+91 8791967004 — Dhruvsingh7077@gmail.com — LinkedIn — GitHub — dhruvsh.com

Experience

Full Stack Developer Intern Sept 2025 – Present

Phyniks Dreamlabs LLP, Bangalore, India

- Developed scalable backend APIs using **NestJS** and built internal admin tooling with **Next.js**.
- Designed scalable data models using **MongoDB** to manage store owners and platform users.
- Built a **role-based admin dashboard** enabling **Super Admins** to manage and monitor all store owners across the platform.
- Implemented **pagination and filtering** for efficient handling of large datasets of store owners.
- Developed **admin workflows** allowing platform administrators to add, manage, and monitor store owners.
- Built dashboards displaying **per-store owner details** and **analytics** improving operational visibility.

Projects

AI API Gateway for LLM Workloads Demo — Source Code

TypeScript, Node.js, Express, Redis, Docker, AWS EC2, Prometheus, Grafana

- Built a centralized **API Gateway** routing LLM requests to multiple providers through a unified secure interface.
- Implemented **API key lifecycle management**, **rate limiting**, and **daily budget enforcement** for controlled API usage.
- Reduced median latency by **42.6%** and p95 latency by **26.1%** using **Redis response caching**.
- Increased cache-hit rate from **0% to 100%**, eliminating duplicate inference calls and reducing repeat-request cost by **100%**.
- Containerized services with **Docker** and deployed the gateway on **AWS EC2** for production hosting.
- Implemented **CI/CD pipelines with GitHub Actions** and added **integration tests** to ensure reliable automated deployments.

Blog Platform Demo — Source Code

React, Node.js, Redis, RabbitMQ, Docker, Google Gemini API

- Built a scalable **microservices-based blogging platform** using **React** and **Node.js** with role-based admin workflows.
- Integrated **Google Gemini API** to enable **AI-powered content features** within the platform.
- Implemented **OAuth-based authentication** enabling secure user login and account management.
- Improved API response time by nearly **2x** through **Redis caching**.
- Designed asynchronous notification pipelines using **RabbitMQ** for reliable **background job processing**.
- Implemented **SSR/SSG optimizations** improving page load performance and SEO visibility.

Education

Acharya Institute of Technology 2022 – 2026

B.Tech in Computer Science

Bangalore, India

St. Mary's Convent School 2021 – 2022

12th Grade – Physics, Chemistry, Mathematics

Technical Skills

Languages: JavaScript, TypeScript, SQL
Frontend: React, Next.js, Tailwind CSS
Backend: Node.js, NestJS, Express, REST API Development
Databases: MongoDB, PostgreSQL, Supabase, Prisma
Infrastructure: Docker, Redis, RabbitMQ, AWS EC2
Observability: Prometheus, Grafana
Tools: Git, GitHub Actions, Vercel, Render
